Mr. Jose Torres,

We as residents in Conroe, the Woodlands and truly all of the counties that will be impacted (put at risk) by the waste water injection wells proposed for our area - are well informed and well aware of the consequences we will likely face in short order if this project becomes reality.

We know how likely it is that these wells will fail due to their age, their capacity and the strong likelihood that the permit covers only a small percentage of what will be pumped-proven by the consistent blatant breach of the limits imposed by the permits in other areas as seen over the years and very recently in Daisetta. (TCEQ does not hold oversight as a high priority each breach has a comment that the resources aren't there to do it's job correctly-it's anyone's guess why.)

We are amazed that any company no matter their claim of safety could be seriously considering risking the lives and future health of communities on this scale since so many aquifers are in this spot.

I have a two questions for you:

1-When the wells fail, will you come back to address us (the families who decided to trust the judgment of those who approve this) and explain to us how we will help our children, our grandchildren and other family members get through their future diseases that were determined "enough" of a risk to bear.

2-Are you willing to have your child raise a family in this area, remain here and prove the vision that this is in fact a safe idea.

It would be amazing and good to get a response from you.
